2. Citations and explanations

Claims 1-5

The feature of producing rolling paper for cigarettes that contains the amounts of calcium carbonate and the combustion regulating agent that are set forth in Claims 1-4 would be easy for a person skilled in the art in the light of the disclosures of Document 1 (Claims 1, 2 and 4; page 4, lines 26-28) cited in the international search report.

In addition, when making paper in a common paper machine, the feature of imparting disproportionate amounts of the filling materials to one side is common technical knowledge, therefore it would be easy for a person skilled in the art to obtain rolling paper that fulfills the conditions set forth in Claim 5.

Claim 6

The feature of making the ash content of the surface layer on the top side and the bottom side of the rolling paper to be 35% or less is not disclosed or suggested in any of the documents cited in the international search report.
